DETAILED ACTION

Allowable Subject Matter

1. The following is an Examiner's Statement of Reasons for Allowance:

Suekane (JP401282696A) disclosed a prepaid card for purchasing gasoline at a gas station.

Randelman et al (US Patent No. 5,072,380) disclosed a system and method for identifying a vehicle mounted transponder in a prescribed area of a service station. Radio Frequency signals from the transponder are detected by an antenna and customer identification data is read from the transponder into the system. The transponder activates the fuel dispensing system and allows the customer in the vehicle to fuel the vehicle upon proper identification.

McCrindle et al (GB 2222714A) disclosed a cashless payment system for purchasing gasoline at a gas station.

"Buying gas at the pump no longer requires a card or cash...", Business Wire, p4040100, dialog file 148, Accession No. 09402394) disclosed an automated system in which an antenna mounted in a postage stamp sized keychain communicates with a gas pump from a distance using radio waves. The customer is identified and may begin to fuel his/her vehicle.

The prior art taken alone or in combination failed to teach or suggest if a vehicle-mounted transponder is determined to be within the operable range of one of the first electromagnetic fields and if a hand-held transponder is determined to be within the operable range of one of the second

Art Unit: 2164

electromagnetic fields corresponding to the same fuel dispenser, then overriding the use of the customer identification data from the vehicle-mounted transponder so that the customer identification data from the handheld transponder may be used to process the transaction at the fuel dispenser taken in combination with a fuel dispensing method with radio frequency customer identification capabilities as recited in independent claim 25.

The prior art taken alone or in combination failed to teach or suggest a processing equipment being operable to override the use of the vehicle-mounted transponder for charging the transaction to the customer and instead allowing use of the hand-held transponder for charging the transaction to the customer when both the vehicle-mounted transponder and hand-held transponder are within the respective predetermined long range and short range of the dispensing area taken in combination with a dispensing system with radio frequency customer identification capabilities as recited in independent claim 50.

The prior art taken alone or in combination failed to teach or suggest if both a vehicle-mounted transponder and a handheld transponder are determined to be within the respective vehicle fueling range and close range before the dispenser is activated, overriding the use at the dispenser of the vehicle-mounted transponder, whereupon following activation of the dispenser the hand-held customer identification data received by the reader is associated with a transaction at the activated dispenser, the transaction at the activated dispenser is permitted and charged to the customer according to the handheld transponder customer identification data taken in combination with a fuel dispensing method as recited in independent claim 55.

Art Unit: 2164

The prior art taken alone or in combination failed to teach or suggest determining whether a hand-held transponder containing customer identification data is within a close range of a dispenser, the close range being smaller than the vehicle fueling range of the dispenser and providing an in-range indication to the customer when a vehicle -mounted transponder is within the vehicle fueling range or a hand-held transponder is within the close range taken in combination with a fuel dispensing method as recited in independent claim 56.

The prior art taken alone or in combination failed to teach or suggest if both a vehicle mounted transponder and a handheld transponder are determined to be within the respective vehicle fueling range and close range, overriding the use at the dispenser of the vehicle mounted transponder, whereupon the handheld customer identification data received by the reader is associated with a transaction at the dispenser, and the transaction is permitted and charged to the customer according to the handheld transponder customer identification data as recited in independent claim 57.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
